

It does extend to the mounting locations, but it doesn't look very strong. Is this what you should use to mount a \$25k projector to?

A universal mount makes compromises to fit every projector

Low profile, but not any better than the Engage design.

Trying to fit the Sony 3 point mounting is even worse

Used the Sony hole pattern in our mount to fit this universal mount to. This is what it would look like on your Sony. Clearly not designed for the Sony.

The middle hole on the Sony is so close to the CG, that this universal mount cannot hang the projector over the CG. Compromise again.
